

**Learners in MLOPS module**

Me waiting till the last minute to do everything then being shocked that I don't have enough time

ML Model performing well against the test set

The moment it enters the real world

**AGENDA**

-> Discuss how to avoid 1000s of hours of torture.

① Exp with many diff models

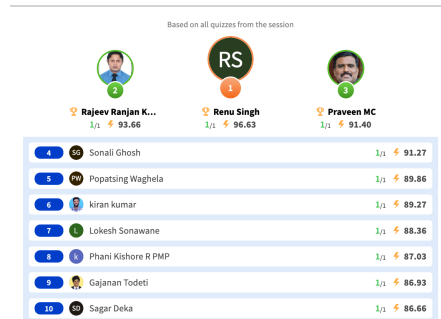

What does model governance involve in a machine learning project?

13 users have participated

- A Only deploying the best model for user access 0%
- B Ensuring that project code is well documented 8%
- ☒ C Tracking the experiment from the experimentation to deployment for auditing purposes 92%
- D Reducing the data required for training the model 0%

## What purpose do 'artifacts' serve in MLflow?

0 users have participated

- A To record every login attempt into the system 0%
- B To store machine learning algorithms 0%
- ☒ C To keep track of non-parameter and non-metric outputs like models and visualizations 0%
- D To track real-time changes to the source code 0%

Based on all quizzes from the session

## Which method is used to log parameters in MLflow?

0 users have participated

- ☒ A mlflow.log\_param() 0%
- B mlflow.log\_metric() 0%
- C mlflow.log\_artifact() 0%
- D mlflow.log\_user() 0%

CodeRow work

## EC2 instance types

	General Purpose		Compute Optimized	Memory Optimized		Accelerated Computing	Storage Optimized		
Type	t2	m5	c5	r4	x1e	p3	h1	i3	d2
Description	Burstable, good for changing workloads	Balanced, good for consistent workloads	High ratio of compute to memory	Good for in-memory databases	Good for full in-memory applications	Good for graphics processing and other GPU uses	HDD backed, balance of compute and memory	SDD backed, balance of compute and memory	Highest disk ratio
Mnemonic	t is for <b>tiny</b> or <b>turbo</b>	m is for <b>main</b> or <b>happy medium</b>	c is for <b>compute</b>	r is for <b>RAM</b>	x is for <b>xtreme</b>	p is for <b>pictures</b>	h is for <b>HDD</b>	i is for <b>IOPS</b>	d is for <b>dense</b>
